

Energy Optimization Strategies

Maximize Your Daily Performance

The Energy Equation

Energy = (Sleep + Nutrition + Movement) - (Stress + Inflammation)

To optimize energy:

- Maximize the inputs
- Minimize the drains

Most people focus on adding more.

Smart executives focus on removing drains first.

Energy Drains to Eliminate

1. Poor Sleep (<7 hours)
2. Sugar crashes (processed carbs)
3. Dehydration
4. Sitting all day
5. Chronic stress
6. Toxic relationships
7. Overtraining
8. Multitasking
9. Decision fatigue
10. Clutter (physical & mental)

Eliminate one drain = 10% energy boost

Circadian Rhythm Optimization

Your body has natural energy peaks and valleys.

Work WITH them, not against them.

6-9 AM: Peak cortisol

- Best for: Deep work, strategy, planning

10 AM-12 PM: High focus

- Best for: Creative work, problem-solving

12-2 PM: Post-lunch dip

- Best for: Meetings, admin tasks

2-4 PM: Second wind

- Best for: Collaboration, execution

4-6 PM: Declining energy

- Best for: Light tasks, planning tomorrow

6-10 PM: Wind-down

- Best for: Family, hobbies, recovery

Strategic Caffeine Use

Caffeine is a tool. Use it strategically.

Optimal Protocol:

- Wait 90-120 min after waking
- First dose: 9-10 AM
- Second dose (optional): 1-2 PM
- Cut-off: 2 PM (no exceptions)

Dosage:

- 100-200mg per dose
- Max 400mg daily

Pair with:

- L-theanine (reduces jitter)
- Hydration (prevents crash)

Avoid:

- First thing in morning (disrupts cortisol)
- After 2 PM (disrupts sleep)
- On empty stomach (causes crash)

Power Naps

The 20-Minute Reset

Benefits:

- Improved alertness
- Better memory
- Enhanced creativity
- Reduced stress

Protocol:

1. Set timer for 20 minutes
2. Dark, quiet environment
3. Lie down or recline
4. Close eyes, relax
5. Don't worry if you don't sleep

Best time: 1-3 PM

Avoid:

- Naps >30 min (sleep inertia)
- Naps after 3 PM (disrupts night sleep)

Nutrition Timing

When you eat matters as much as what you eat.

Breakfast (within 1 hour of waking):

- High protein (30-40g)
- Moderate fat
- Low-moderate carbs
- Sets metabolic tone for day

Lunch (12-1 PM):

- Balanced macros
- Protein + vegetables + carbs
- Avoid heavy, greasy foods

Dinner (6-7 PM):

- Lighter than lunch
- 3 hours before bed
- Protein + vegetables

- Lower carbs (unless training)

Snacks (if needed):

- Protein-based
- Between meals
- Avoid grazing

The Energy Scorecard

Daily Tracking (1-10):

- Morning energy
- Midday energy
- Evening energy
- Sleep quality
- Nutrition quality
- Movement completed
- Stress level (inverse)

Goal: Average 8+ for 30 days

If energy drops:

- Check sleep first
- Review nutrition
- Assess stress
- Reduce training if needed
